Cyber Security Assessments Datasheet

About Cyber Security Assessments:

This review will provide the Customer with advanced Security Testing of the Company's core business applications. Gold N' Links Cyber can assist in selecting the most suitable systems/assets platforms to assess, while considering those which would be most likely targeted by an external hacker.

Gold N' Links Cyber experts possess firsthand experience in testing of complex organizations and platforms, which will enable us to provide a highly skilled service in close co-ordination with the Customer.

Gold N' Links's Cyber approach, including status reporting, will enable the Company to have immediate sight of the security vulnerabilities that require remediation. We are confident that the program of work described below and carried out by Gold N' Links Cyber team of experts will further develop the high level of security for the Customer. Our Assessments offer extensive knowledge in various aspects of cyber & information security, such as: architecture, infrastructure, application, development, procedures and more.

Target Audience:

Organization Wide – All Lines of Business
